

VISIO-SESAME

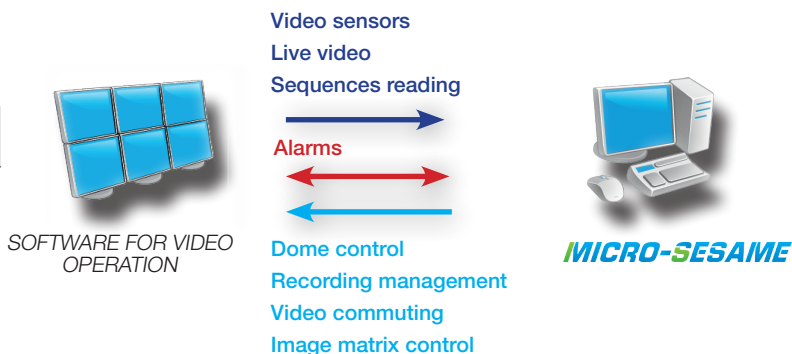

Compatibilities

GEUTEBRUCK
Excellence in Video Security

Attention, depending on the brands, all versions are not supported and not all features are supported. Please contact your usual TIL contact person for checking the compatibility.

Synoptics

Video monitoring via IP

The VISIO-SESAME software option enables communication with many digital video recorders and software.

The developed gateways for solutions such as BOSCH, CASD, GENETEC, GEUTEBRUCK, HYMATOM, STIM, etc. perform most of the video monitoring operations from any MICRO-SESAME workstation :

- Real-time monitoring
- Record triggering
- Monitorization of event input/output
- Dome control
- Visualization of recorded images
- Audio management (depending on the system)

The video features can be directly controlled from one single MICRO-SESAME graphical monitor, common to all security systems (access control, intrusion, fire, BMS, ...). Operation is made easier and interaction between both systems can be automated (actions for alarms or events). Processing efficiency is guaranteed.
